Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Species I – claims 1-4, 9-12, and 20-34.

Species II – claim 5.

Species III – claims 13 and 35-36.

Species IV – claim 14.

Species V – claims 15-19 and 37-43.

The species are independent or distinct because:

In Species I, if the first processing device exceeds its thermal threshold during execution of the first operation, transferring the first operation to a second one of the plurality of processing device.

In Species II, if the first processing device exceeds its thermal threshold during execution of the first operation, transferring the first operation to a queue.

In Species III, a second processor operable to execute a second operation, the second operation having a low priority and the second operation is transferred to the first processor, and the first processor executes the second operation at a reduced clock speed.

In Species IV, determining a thermal value indicative of the temperature of the component; depending on the thermal value:

lowering the clock speed and selecting one of the operations having lower priority of execution, or maintaining or raising the clock speed and selecting one of the operations having a higher priority of execution.

In Species V, wherein, if the thermal threshold of the processor is exceeded, the processor selects the first operation for processing, and if the thermal threshold of the processor is exceeded, the processor selects the second operation for processing.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stefan Stoykov whose telephone number is (571) 272-4236. The examiner can normally be reached on 8:00AM-4:30PM.
